From our headquarters in Liverpool England, ICL Vacuum Cooling are serving the vacuum cooling industry worldwide with cutting edge technology, bespoke design and market leading aftercare and maintenance.

## Case Study

# Ravine Mushrooms, Canada

Cooling perishable produce such as (in this case) mushrooms to an optimum temperature immediately upon harvest is crucial in ensuring the highest standards of quality, freshness and shelf life. That is why ICL were awarded the contract to design, build and install a 2 pallet capacity vacuum cooler for one of the largest mushroom producers in Ontario supplying quality mushroom products to the major supermarket chains in Canada & USA as well as local food service outlets since 1975.

ICL custom built the vacuum cooler to the highest standards in our UK manufacturing facility. We exported and successfully installed the machine in Ontario, Canada in October 2017. The vacuum cooler performed to an excellent standard with a 16 minute cooling cycle per 1,000kg load of mixed mushrooms.
